

Abstract

Method for Processing Semi Persistent Scheduling, Communication Device, and Storage Medium

5

Disclosed in the present application are a method for processing semi persistent scheduling (SPS), a communication device and a storage medium. The method for processing SPS is applied to a first communication device, and comprises: listening to control information of a control channel, wherein the control information is used for instructing multiple carriers to
10 activate or release SPS resources, and the SPS resources are communication resources configured by the SPS; and sending response information on at least one data channel, wherein the response information comprises: a response to the activation or release of the SPS resources of one or more carriers.
