

Abstract

[Abstract]

[Problem] To provide an information processing device that makes it possible to more accurately and simply set a route point for a moving body. [Solution] An information processing device for setting a route point for a moving body, said device comprising: a display control unit for displaying, on a display device, field-of-view images in a virtual three-dimensional space corresponding to a space to be moved through; a determination unit for determining a single selected field-of-view image from among the displayed field-of-view images; and a point setting unit for, on the basis of the viewpoint position of the selected field-of-view image, setting a route point for the moving body in the space to be moved through.
