

Abstract

A sealable multi-layer resin sheet 11 sequentially includes a first sealable resin sheet 1 and a second sealable resin sheet 12 toward one side in a thickness direction. The first sealable resin sheet 1 contains a layered silicate compound and a first inorganic filling material. The second sealable resin sheet 12 contains a second inorganic filling material. A content ratio (B) of the first inorganic filling material to the first sealable resin sheet 1 is 50 mass% or more. A content ratio (A) of the second inorganic filling material to the second sealable resin sheet 12 is 60 mass% or more. The content ratio (B) of the first inorganic filling material to the first sealable resin sheet 1 and the content ratio (A) of the second inorganic filling material to the second sealable resin sheet 12 have a predetermined relationship.
