

PIXEL ARRAY SUBSTRATE

ABSTRACT

5 A pixel array substrate includes a first touch signal line having a first and second
portion and a bridge portion, pixel structures including a first and second pixel structure,
a first and second data line, a first and second connection pattern, and a touch electrode.
The first pixel structure and the second pixel structure are respectively located on a first
and second side of the first touch signal line. The first data line and the second data
10 line are respectively located on the second and first sides of the first touch signal line.
The first connection pattern is electrically connected to the first data line and the first
pixel structure. The second connection pattern is electrically connected to the second
data line and the second pixel structure. The bridge portion of the first touch signal
line crosses over the first connection pattern and the second connection pattern.
