

VERSATILE PIPE MARKER TAPE

ABSTRACT

The pipe marker tape for marking predetermined set of pipes of at least two different
5 outside circumferences comprises indicia on a front layer, an adhesive layer and a
release liner with cut lines at a regular distance δ defining release liner stripes such
that for each pipe of the predetermined set of pipes, there is a positive whole number
K for which $(K+1) \times \delta$ is equal to or greater than the sum of the outside circumference
of said pipe and a predetermined overlap, so an individual wrap-around marker fitting
10 installation on said pipe is obtained by cutting the pipe marker tape along two cut
lines separated by K+1 release liner stripes, said cut lines left on the obtained
markers defining at least three release liner stripes that facilitate installation.
