(54) Title: SYSTEM AND METHOD FOR TEMPORARY APPLICATION COMPONENT DELETION AND RELOAD ON A WIRELESS DEVICE

(57) Abstract: A system (10) and method for managing the deleting and reloading of software application components on a wireless device, such as a cellular telephone (12), personal digital assistant (18), pager (20), or other computer platform (22). The wireless device has one or more resident executable software applications wherein each application has one or more application components and application-associated data, such as software licenses and user-specific data. The wireless device selectively deletes one or more application components (86, 88) of the resident software applications without loss of the application-associated data to clear resources on the wireless device (92), and selectively prompts an application download server across a wireless network to transmit deleted application components needed to be re-installed on the wireless device (94) to execute the application.
