

DRUM WASHING MACHINE

ABSTRACT

A drum washing machine includes a lid formed of a lid unit,
5 having a transparent window through which a user can monitor the
laundry from the outside, and a transparent lid cover for covering the
lid unit. Multiple engaging tabs protruding rearward are provided to
the rear face around the periphery of the lid cover, and multiple
engagement stopper holes for receiving the engaging tabs and
10 elastically engaging the tabs with engaging sections provided to the lid
unit for preventing the tabs from slipping off. The tabs and the holes
form multiple fixed sections which fit and fix the lid cover to the lid
unit. Parts of the surface of the lid cover correspond to at least the
fixed sections are shaped such that the parts at least refract or
15 disperse the light from the inside when the light transmits through the
lid cover.
