| (54) Title: A PROCESS FOR DEACIDIFYING A CRUDE OIL SYSTEM<br><br>(57) Abstract<br><br>This invention relates to a process for deacidifying a crude oil system, said process comprising the steps of: (a) contacting the crude oil system with a polar solvent, such that at least part of the organic acid present in the oil is extracted into the solvent as an extract phase; and (b) separating said extract phase from the treated crude oil system of step (a).                                                                                                                                                                                                                                                                                                                                           |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                |
