

TAPE ADHERING METHOD AND TAPE ADHERING DEVICE

5

ABSTRACT OF THE DISCLOSURE

10 A tape adhering device (10) comprises: a drawing
roller (42) for drawing out a tape (3); a tape fixing
means (47) for fixing one portion of the tape drawn out
from the drawing roller; a tape drawing means (62) for
drawing out a predetermined amount of tape, which is
fixed by the tape fixing means, from the drawing roller
between the tape fixing means and the drawing roller; and
15 a tape adhering means (49, 31, 37) for adhering the tape,
which is located in the downstream of the tape fixing
means, onto an object to be adhered (20, 36) under the
condition that fixing operation of the tape by the tape
fixing means is released. It is preferable that the
20 length of the tape drawn out by the tape drawing means is
not less than the diameter of the object to be adhered.
Due to the foregoing, it is possible to prevent wrinkles
from being formed on the tape at the time of adhering the
tape.
