

Abstract

In an air conditioner, an air cleaner (200) includes a charging unit (210) for charging particles in the air and a dust collecting unit (220) for collecting the particles charged by the charging unit (210) by an electrostatic force. A filter cleaning device
5 (300) includes a device body (310) to house a filter (140) for capturing dust in the air in a movable form, and a part of the device body (310) forms a supporting part to support the air cleaner (200). An indoor unit body (110) houses the filter cleaning device (300), and houses the air cleaner (200) by supporting it by the supporting part.
