

DATA PROCESSING METHODS, APPARATUSES, AND TERMINAL DEVICES

ABSTRACT

Embodiments of the present specification provide data processing methods,
5 apparatuses, and terminal devices. The methods include the following: providing a
service code management interface; receiving a specified quantity that is input by a user
in the service code management interface; generating the specified quantity of service
codes, where the specified quantity of service codes include the same user identification
information; and displaying the specified quantity of service codes.
