## Abstract

## Random Access Method, Terminal Apparatus, and Network Apparatus

The present application discloses a method for random access, a terminal device, and a network device. The method includes that: a terminal device sends an access request message to a network device and indicates access auxiliary information of the terminal device to the network device through the access request message; the terminal device receives an access response message sent by the network device according to the access request message, wherein the access response message includes indication information for indicating rejection of access of the terminal device, and the indication information includes access suggestion information corresponding to the access auxiliary information. Thereby a success rate of random access of the terminal device is improved.
