CLAIMS

1. A presentation management system (1) for managing presentations, comprising:

slide storage means (3) for storing a plurality of slides relating to presentations; and

group slide information addition means (11) for adding group slide information indicating that a display order is fixed in a group of slides (7) to a slide group composed of any two or more of the plurality of slides (5) stored in the slide storage means (3),

wherein the slide storage means (3) further stores conditions that:

the group of slides (7) to which the group slide information is added has the display order that is unchangeable by other users' terminals that are not a terminal which adds the group slide information,

slides included in the group of slides (7) are partially undeletable by the other users' terminals,

the other users' terminals can change display order of slides except for the slides in the group of slides (7) to which the group slide information is added and can delete slides except for the slides in the group of slides (7) to which the group slide information is added, and

the terminal which adds the group slide information can change order of the slides in the group of slides (7) to which the group slide information is added and can partially delete the slides in the group of slides (7) to which the group slide information is added.

2. The system according to claim 1, further comprising:

slide display means (13) for displaying slide images that are images relating to the plurality of slides (5) on a screen; and

display order display means (15) for displaying the display order in the group of slides (7), for slide images relating to respective slides included in the group of slides (7).

3. The system according to claim 1, wherein

even when any content of the plurality of slides (5) is updated, the group slide information is not updated.

4. The system according to claim 1, further comprising:

requisite information addition means (17) for adding requisite information indicating that a slide is requisite to any of the plurality of slides (5) stored in the slide storage means (3),

wherein the slide to which the requisite information is added is made undeletable.

5. The system according to claim 4, further comprising:

slide display means (13) for displaying slide images that are images relating to the plurality of slides (5) on a screen; and

requisite information display means (19) for displaying requisite information relating to the slide to which the requisite information is added for the slide image relating to the slide to which the requisite information is added.

6. A program for causing a computer to function as a presentation management

system that manages presentations, wherein

the presentation management system includes:

slide storage means (3) for storing a plurality of slides (5) relating to presentations; and

group slide information addition means (11) for adding group slide information indicating that a display order is fixed in a group of slides (7) to a slide group composed of any two or more of the plurality of slides (5) stored in the slide storage means (3), and

wherein the slide storage means (3) further stores conditions that:

the group of slides (7) to which the group slide information is added has the display order that is unchangeable by other users' terminals that are not a terminal which adds the group slide information,

slides included in the group of slides (7) are partially undeletable by the other users' terminals,

the other users' terminals can change display order of slides except for the slides in the group of slides (7) to which the group slide information is added and can delete slides except for the slides in the group of slides (7) to which the group slide information is added, and

the terminal which adds the group slide information can change order of the slides in the group of slides (7) to which the group slide information is added and can partially delete the slides in the group of slides (7) to which the group slide information is added.
