

[ABSTRACT]

The purpose of the present invention is to provide a device and method for automatically transporting a chemical container, wherein a chemical container for which chemical information required by a chemical supply device has been checked
5 can be automatically supplied to the chemical supply device. To achieve the purpose above, a device for transporting a chemical container according to the present invention comprises: at least one transport line for transporting, to a chemical supply device (5), a chemical container (2) input to an input unit (110); and a control unit that receives chemical information of the chemical container (2) transported through
10 the transport line and performs a control to supply the chemical container (2) to the chemical supply device (5) when the received chemical information matches information required by the chemical supply device (5).
