PROCESSING PLANT

ABSTRACT

To provide a technique for reducing the influence of the outflow of a fluid including combustible substances by using a simple method. A processing plant 2 provided outdoors and processing a fluid including combustible substances includes: an apparatus arrangement region in which an apparatus group including a plurality of apparatuses for handling the fluid is arranged; and a gas discharge region 40 set to discharge a gas of the combustible substances toward the outside of the processing plant 2 when the fluid flows out from the apparatuses and the gas is generated. An exhaust fan 41 for pushing out the gas is provided in the gas discharge region 40.
