

MESSAGE APPARATUS

ABSTRACT

5 There is provided a message apparatus in which both of
a message mechanism and a warm-cool air supply section are
housed inside a backrest, and nevertheless the thickness of
the backrest in a front-rear direction can be reduced.

 A message apparatus (1) comprises: a backrest (3) for
10 supporting user (U)'s back; and a message mechanism (4)
disposed inside the backrest (3) for producing massage
action on user (U)'s back. The backrest (3) has its front
side made to have a two-layer structure, and includes a
warm-cool air supply section (14) capable of feeding warm
15 or cool air into an interlayer region of the two-layer
structure. The message mechanism (4) can be moved up and
down along the lengthwise direction of the backrest (3),
and the warm-cool air supply section (14) is located
outside of a movement area which is the range of up-and-
20 down movement of the message mechanism (4).
