

GAME SYSTEM FOR BETTING AFTER DEALING CARDS AND METHOD THEREOF

Abstract

A game system and a method thereof. At least one player betting
5 on bet areas to generate a basic bet data, each of the bet areas being
correspondingly indicated with an odds; when a card-dealing unit
performing a card-dealing action, suspending the card-dealing action
if meeting a specified condition; a game processing unit determining
and obtaining a latest appearance probability of each of game results,
10 so that an odds calculation unit changing at least one of the odds
according to the latest appearance probability; when the card-dealing
action being suspended, the at least one player making an additional
bet to generate an additional bet data, and generating any one of the
game results after the card-dealing unit resuming the card-dealing
15 action; and a payout processing unit paying the at least one player
based on the generated game result, the additional bet data and the
basic bet data.
