S201 Configure a customer premises equipment (CPE) in the Intranet of an enterprise, and import a preset access request of the Intranet of the enterprise to the customer premises equipment
S202 The customer premises equipment forwards to an acceleration network an access request complying with a preset rule in an egress access request
S203 The customer premises equipment receives from the acceleration network response data after performing back-to-source processing on the egress access request
S204 Send the response data to a sender of the egress access request

(57) Abstract: Disclosed herein are an enterprise egress access request processing method, an apparatus, a system, a device and a medium, the method comprising: configuring a customer premises equipment in the Intranet of an enterprise, and importing an enterprise egress access request to the customer premises equipment; the customer premises equipment forwarding the egress access request to an acceleration network or sending to the acceleration network an access request complying with a preset rule in the egress access request; the customer premises equipment receiving from the acceleration network response data after performing back-to-source processing on the egress access request; sending the response data to a sender of the egress access request. The present application may simultaneously consider enterprise access cloud service and SaaS service experience, and deployment costs are greatly reduced compared to a dedicated line, the complexity of operation also being greatly reduced.
