

METHOD AND APPARATUS FOR DISPLAY OF WINDOWING APPLICATION
PROGRAMS ON A TERMINAL

ABSTRACT

A video display terminal capable of operating with a graphical user
5 interface such as Windows³ provides windowing functionality to permit use of
popular applications programs resident on a server, without requiring more than
application data to be transmitted from the server, and keyboard and mouse
information to be transmitted from the terminal to the server. In addition, a
method for updating terminal operating characteristics over a communications
10 link from a host is disclosed. Finally, method and apparatus are disclosed for
implementing multiple personalities within a terminal and switching among such
personalities.
