

ABSTRACT

PROTECTIVE CONTAINER FOR SUBSTANTIALLY
PARALLELEPIPEDAL BODIES

A protective container for substantially parallelepipedal
5 bodies comprises a hollow parallelepipedal case (6) which is
open on one side (7) and a case part (9) for covering the open
side and which in this position, is channel-shaped in cross-
section along at least part of its length. Originality
closure means may connect the hollow parallelepipedal case and
10 case part and indicate the loss of originality after opening
for the first time.

The protective container can be used for substantially
parallelepipedal articles of all types, e.g. any type of
cassette.
