

ABSTRACT

HOUSING CASE FOR PLATE-SHAPED OBJECTS

There are provided a plurality of plate-shaped object housing spaces that are formed by allowing a plurality of partition walls 2 made of a resin material having an impact-absorbing property to engage a pair of side walls in a manner so as to be aligned with predetermined intervals from each other and also to be allowed to shift close to or apart from each other position fixing means 51 for fixing position in the width direction with respect to the partition walls 2 by pressing the plate-shaped objects 1 housed in the plate-shaped object housing space S from outside of the width direction of the plate-shaped objects 1 ; and a tightening means 4 for tightening and fixing the group of partition walls housing the plate-shaped objects 1 in an approaching direction of the adjacent partition walls 2, and in this arrangement, the size of the entire case that has been tightened and fixed is set to a predetermined size that is fitted to a predetermined transporting box.
