(54) **Title:** A VALVE HANDWHEEL AND A VALVE ARRANGEMENT COMPRISING SUCH A VALVE HANDWHEEL

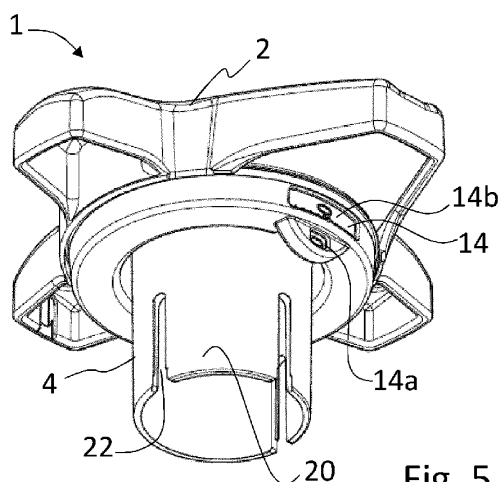

Fig. 5

(57) **Abstract:** The invention relates to a valve handwheel, comprising a first handwheel part comprising a first position-indicating window, a second handwheel part comprising a second position-indicating window, and a geometrical centre axis extending through the first and second handwheel parts. The first handwheel part is rotatably connected to the second handwheel part. When a user turns the first handwheel part around said geometrical centre axis, the first position-indicating window rotates with the first handwheel part while the second position-indicating window remains stationary with the second handwheel part. The invention also relates to a valve arrangement comprising such a valve handwheel.
