ABSTRACT

POWER DEMAND AMOUNT CALCULATION SYSTEM, POWER DEMAND AMOUNT CALCULATION METHOD, POWER DEMAND AMOUNT CALCULATION APPARATUS, PROGRAM, AND RECORDING MEDIUM

Provided is a power demand amount calculation system that calculates the amount of demand for power that is necessary for charging a plurality of electric vehicles, and that is provided with a power demand amount calculation apparatus that calculates the amount of demand for power that is necessary for charging each of the electric vehicles. The power demand amount calculation apparatus comprises a power demand amount calculation unit that calculates, on the basis of at least the rated capacities and the actual capacities of batteries of electric vehicles that satisfy prescribed conditions, among the plurality of electric vehicles, the amount of demand for power necessary for charging the electric vehicles that satisfy the prescribed conditions.
