

ABSTRACT OF THE DISCLOSURE (FIG. 2)
"CARD-SHAPED ELECTRONIC APPARATUS"

5 A card-shaped electronic apparatus includes a
base in the form of a substantially rectangular plate
having a natural bending vibration mode, components
10 mounted on the base, and covers attached to the base
and covering the components. The base has a pair of
side edge portions capable of being guided along a
pair of guide rails of a card slot. Protrusions for
15 determining the position where the base contacts the
guide rails are located individually near positions
corresponding to nodes of the bending vibration
mode on each side edge portion, and project in
the thickness direction of the base.
