

CARGO TRANSPORT VEHICLE HAVING A VARIABLE COVERED CARGO SECTION

Abstract

An apparatus (10) mountable to a cargo transport vehicle (12) to define the
5 volume of space occupied by cargo placed in a cargo section (14) of the vehicle (12).
The apparatus (10) has a first member (16) and four support members (18). Each of
the support members (18) has a base (20) that is mountable to a floor (22) of the
cargo section (14). The support members (18) are adjustable to vary height of the
first member (16) relative to the floor (22). The volume of cargo space for the cargo
10 section (14) that is defined by the first member (16) is varied according to that
height.
