(54) Title: METHOD AND SYSTEM FOR FACILITY MANAGEMENT FOR IDENTIFYING ACTIONABLE EVENT IN RELATION TO A BUILDING

FIG. 2

(57) Abstract: A method of facility management for identifying an actionable event in relation to a building is provided. The method includes: obtaining a plurality of sensor data from a plurality of sensors, respectively, whereby each sensor of the plurality of sensors is associated with a building asset of a plurality of building assets of the building, each building asset has a corresponding digital representation in a building information database, and for each building asset, the corresponding digital representation of the building asset has one or more attribute parameters, a location parameter and one or more sensor observation parameters associated therewith; and identifying an actionable event based on the one or more attribute parameters, the location parameter and the one or more sensor observation parameters associated with that of one or more building assets of the plurality of building assets. A corresponding system for facility management for identifying an actionable event is also provided.
