

FACIAL MASK HOLDER

ABSTRACT

5 The present invention relates to a facial mask holder that is made of a plastic material. The facial mask holder is designed in plate-like base (1) with a liquid storage chamber (11) built on the plate-like base (1) for adding in the skin care liquid. A plurality of partition areas (12) are built in the liquid storage chamber (11) to facilitate in adding different types of skin care liquid based on the user's facial skin condition. These
10 partition areas (12) are able to ensure the particular type of skin care liquid to remain in the certain areas of the liquid storage chamber (11) and avoid diffusing or penetrating to other area of the liquid storage chamber (11). When a facial mask (2) is placed onto the liquid storage chamber (11), the facial mask will absorb the different types of skin care liquid on the different areas of the facial mask based on what have
15 been added into the liquid storage chamber (11) and its partition areas (12). This will allow a facial mask filled with different types of skin care liquid to provide skin care maintenance in the targeted areas and thus, enhance the overall facial skin treatment effect.
