

DUAL-BEARING REEL
ABSTRACT OF THE DISCLOSURE

Dual-bearing reel, having two clutch-operating handles for performing different clutch operations, designed to facilitate maintenance work on the interior of the handle-mounting side. A mechanism mounting plate (11) for the dual-bearing reel is provided on a side cover (7) on the handle-mounting side of the reel body, and meanwhile on a side plate (9) on the handle-mounting side, which lets the spool (12) pass through, two clutch-operating handles (17), (27) are fitted for shifting without coming off. Further, a clutch plate (55) that, linked to the two clutch-operating handles (17), (27) engages with a clutch switching mechanism, is provided within the mechanism mounting space.
