(54) Title: OPTIMIZED ARRAYS FOR LOOK AHEAD-OF-BIT APPLICATIONS

FIG. 1

(57) Abstract: Various embodiments include apparatus and methods of operation with respect to well logging. Apparatus and methods include a tool having an arrangement of transmitters and receivers to capture a signal from a first region relative to the tool such that signal contributions from a second region relative to the tool are cancelable, based on placement of the transmitters and receivers with respect to each other. Additional apparatus, systems, and methods are disclosed.
