(54) Title: SYSTEMS AND METHODS FOR DIGITAL RIGHTS MANAGEMENT

FIG. 1

(57) Abstract: A system for digital rights management includes a peer-to-peer (P2P) network, a processor, and a memory, including instructions stored thereon, which when executed by the processor, cause the system to: transmit a first request for a dataset by a first device to a second device on the P2P network; authenticate the first request at the second device based on a predefined rule; generate an encrypted dataset by the second device based on the authenticated first request; access the encrypted dataset at the first device using a decryption key; and transmit a second request for the dataset by a third device to the first device on the P2P network.
