

CODE DIVISION MULTIPLE ACCESS (CDMA) INBOUND
MESSAGING SYSTEM UTILIZING RE-USE OF SEQUENCES

Abstract

5

A communication system for providing two-way communication comprises base stations (15) for transmitting and receiving information and a central controller (10) coupled to and controlling the base stations (15). The central controller (10) selectively assigns seeds to each of the base
10 stations (15) in accordance with the information transmitted and received by the base stations (15).
