

ABSTRACT

Disclosed in embodiments of the present invention are a face recognition method and apparatus, an electronic device, and a storage medium. The method comprises: detecting ambient light of a monitoring region, and obtaining an ambient light parameter; in response to the existence of a target object, performing moving distance detection on the target object; when an ambient light condition is satisfied and the moving distance is greater than or equal to a distance threshold, adjusting screen brightness of a display device according to the ambient light parameter; and obtaining a face image after the ambient light is changed, comparing the face image with a preset image obtain a comparison result, and obtaining a face recognition result according to the face comparison result.
