CLAIMS

1. A presentation support system comprising:

a presentation material storage unit configured to store a presentation material;

a related term storage unit configured to store a plurality of related terms related to the presentation material stored by the presentation material storage unit;

a subsequent information storage unit configured to store information on a subsequent related term as one or a plurality of related terms preferred to be used next to each of the plurality of related terms stored by the related term storage unit;

a term analysis unit configured to analyze a word included in a conversation to obtain conversation information;

a related term analysis unit configured to analyze whether the word analyzed by the term analysis unit is any of the plurality of related terms;

a display unit configured to display the presentation material; and

a subsequent related term selection unit configured to select the subsequent related term related to an analyzed related term from the subsequent information storage unit using information on the analyzed related term as the related term analyzed by the related term analysis unit;

a related term display control unit configured to cause the display unit to display the subsequent related term related to the analyzed related term selected by the subsequent related term selection unit.

2. A presentation support system comprising:

a presentation material storage unit configured to store a presentation material;

a related term storage unit configured to store a plurality of related terms related to the presentation material stored by the presentation material storage unit;

a subsequent information storage unit configured to store information on a

subsequent related term as one or a plurality of related terms preferred to be used next to each of the plurality of related terms stored by the related term storage unit;

a term analysis unit configured to analyze a word included in a conversation to obtain conversation information;

a related term analysis unit configured to analyze whether the word analyzed by the term analysis unit is any of the plurality of related terms;

a display unit configured to display the presentation material; and

a subsequent related term selection unit configured to select the subsequent related term related to an analyzed related term from the subsequent information storage unit using information on the analyzed related term as the related term analyzed by the related term analysis unit, wherein

the presentation material storage unit is configured to associate each related presentation material included in the presentation material with any of the plurality of related terms and store the related presentation material, and

the presentation support system further comprises a related presentation material display control unit configured to cause the display unit to display the related presentation material related to the subsequent related term using the information on the subsequent related term related to the analyzed related term selected by the subsequent related term selection unit.

3. The presentation support system according to claim 1 or 2, further comprising

a used related term storage unit configured to associate the related term analyzed by the related term analysis unit with the conversation information and store the related term.

4. The presentation support system according to claim 1 or 2, wherein

the plurality of related terms include a taboo word prohibited to be used related

to the presentation material,

the subsequent information storage unit includes a correction word as the subsequent related term related to the taboo word, and

the presentation support system further comprises a correction guide unit configured such that when the word analyzed by the related term analysis unit is the taboo word, the correction guide unit causes the display unit to display the correction word.

5. The presentation support system according to claim 1 or 2, wherein

the information on the subsequent related term stored by the subsequent information storage unit is updated by analyzing an order of appearance of the plurality of related terms included in a plurality of conversations related to the presentation material.

6. The presentation support system according to claim 1 or 2, wherein

the subsequent information storage unit is configured to store a plurality of patterns of the information on the subsequent related terms, and

the subsequent related term selection unit is configured such that when any of the plurality of patterns is selected, the subsequent related term selection unit selects the subsequent related term related to the selected pattern.
