

PRE-FABRICATED STAIRCASE PRODUCTION LINE

ABSTRACT

5

Disclosed herewith a pre-fabricated staircase production line, which can effectively increase the production efficiency, save the factory footprint, and simplify the equipment involved. In the production line, a reinforced bar storing area, a reinforced bar binding area, a production area, a post treatment area, and a product storage area are connected with each other in sequence along a lengthwise direction. Each of them includes two parts arranged at a right side and a left side, respectively, with a passageway formed therebetween. A material conveying system is provided between adjacent areas. The product storage area can be used for storage and curing, and optimize the curing conditions of the pre-fabricated members. According to the present invention, technical defects existing in the prior arts, such as large footprint and poor curing of the pre-fabricated members, can be overcome, thus achieving the technical advantages of sufficiently utilizing of the space, increasing the production efficiency and efficacy, improving the quality, or the like.
