

Abstract

Title of Invention: Rupture disc with a means for limiting an opening angle

The invention relates to a means for limiting the opening angle of a rupture disc (B) with a plate (15) which

- comprises a first area (151) that can be bulged and/or deflected under the action of a force perpendicular to the plane of the plate (15) and
- comprises a second area (152) with which the plate (15) can be fastened,

wherein

- the second area (152) is provided at a first edge of the plate (15),
- the plate (15) comprises two second edges that are substantially perpendicular to this first edge.
