(54) Title: FOOD PROCESSING DEVICE CAPABLE OF FOOD HEATING AND SELF-CLEANING AND FOOD PROCESSING METHOD THEREOF

FIG.1

(57) Abstract: A food processing device capable of food heating and self-cleaning and a food processing method thereof. The food processing device includes an accommodation module, a heating tube assembly, a moving module, and a cleaning module. The accommodation module forms an accommodation space for accommodating food to be heated. The heating tube assembly is movably disposed on a side of the accommodation module. The heating tube assembly includes a first steam outlet for outputting steam to food to be heated. The moving module is connected to the heating tube assembly to drive the heating tube assembly to move along a movement route. The cleaning module is disposed on a side of the accommodation module and includes a second steam outlet disposed corresponding to the movement route of the heating tube assembly. The second steam outlet is to output steam towards the heating tube assembly to clean the heating tube assembly.
