(54) Title: WIRELESS NETWORK COMMUNICATIONS SYSTEM

Figure 13

(57) Abstract: Disclosed are a method, system and protocol for processing a Transmission within a wireless network, the network including at least one device that transmits the Transmission and at least one device that receives the Transmission. The method provides for receiving the Transmission at the device that receives the Transmission; determining whether the device that receives the Transmission has previously received the Transmission; and actioning the received Transmission only if the device that receives the transmission has not previously received the Transmission.
