

Abstract

PAVER PRE-STRESSOR APPARATUS AND ASSOCIATED METHODS

5 The invention provides for a paver pre-stressor apparatus for use with a paved
surface having a plurality of pavers. The apparatus includes at least two body members
arranged to be displaceable relative to each other along at least one axis or arc. In
addition, the apparatus further has as adjustable urging means arranged between the
body members. The urging means is configured to adjustably urge the body members
10 away from each other along the axis or arc. Such adjustment of the urging means
facilitates compressive interlocking of the pavers when the apparatus is incorporated
into the paved surface.
