(54) Title: REDUCING COLLISION PROBABILITY FOR VOIP PACKETS

(57) Abstract: A mobile communications device is described that includes a processor configured to establish a network connection with a server in a network and a data generator under the control of the processor that is configured to periodically generate a data unit at a rate having a fixed period. The mobile communications device also includes a transceiver configured to transmit, via the network connection, the data unit during one of plurality of slots, each slot being an adjacent fractional portion of the fixed period.
