(54) Title: TRANSITION FOR OPTICAL FIBRE CABLE

Fig. 1

(57) Abstract: A transition (10, 10') for at least one optical fibre cable through a partition (2). The transition (10, 10') comprises a sleeve (30), a compressible seal (50, 50') and an electromagnetic shielding tube (70, 70'). The sleeve (30) has a first end (31), a second end (32) and an opening (33) extending in an axial direction from the first end (31) for receiving the compressible seal (50, 50'), wherein the compressible seal (50, 50') forms a seal around the optical fibre cable. The shielding tube (70, 70') has a first end (71), a second end (72) and at least one through opening (73) arranged between the first end (71) and the second end (72) for receiving and shielding the at least one optical fiber cable. The second end (32) of the sleeve (30) is connected to the first end (71) of the shielding tube (70, 70') wherein the at least one through opening (73) of the shielding tube (70, 70') is connected to the opening of the sleeve (30) for transition of the at least one optical fibre cable.
