(54) Title: HEARING AID AND METHOD OF COMPENSATION FOR DIRECT SOUND IN HEARING AIDS

(57) Abstract: A hearing aid (200) comprises at least one microphone (210), a signal processing means (220) and an output transducer (230). The signal processing means is adapted to receive an input signal from the microphone. The signal processing means is adapted to apply a hearing aid gain to the input signal to produce an output signal to be output by the output transducer, and the signal processing means further comprises means for adjusting the hearing aid gain up or down until the hearing aid gain differs from the direct transmission gain by more than a predetermined value.
