(54) Title: **A DIGITAL WIRELESS HOME COMPUTER SYSTEM**

(57) Abstract

The present invention provides a digital wireless home computer system. One embodiment of the invention includes a computer with a first digital wireless transceiver, and a home input/output node having a second digital wireless transceiver for communicatively coupling to the first wireless transceiver. This node also has (1) an output device, communicatively coupled to the second wireless transceiver, for presenting an output presentation based on signals received from the computer via the wireless transceivers, and (2) an input device, communicatively coupled to the second wireless transceiver, for receiving input signals from a user interfacing with the home input/output node.
