

## ABSTRACT

### TIMEPIECE INCLUDING FIXATION DEVICE FOR AN ELEMENT ADDED TO A FRAME AND METHOD OF ASSEMBLING THIS ELEMENT ON SAID FRAME

The invention relates to a timepiece having a body or frame upon which an added element may be held, in a detachable manner. The invention also relates to a method of assembling this element on said body or frame.

This timepiece is characterised in that the fixation means of the element added to the body or frame are formed by at least one rotating bolt (10) which is anchored permanently in the material itself of the body or frame (2) and is axially immobilised by this material.
