RISK CONTROL EVENT AUTOMATIC PROCESSING METHOD AND APPARATUS

ABSTRACT

Implementations of the present application disclose a risk control event automatic processing method and apparatus. The method includes: obtaining each piece of risk feature information of a current risk control event; determining a category of the current risk control event based on the risk feature information; obtaining evidence information corresponding to a determination result; and generating case closing information of the current risk control event based on the determination result and the evidence information. According to the implementations of the present application, the risk control event can be automatically processed, to further improve a case closing speed. In addition, the evidence information corresponding to the determination result of the risk control event can be automatically obtained, and therefore, it is convenient to verify the reliability of the determination result of the risk control event.
