

ABSTRACT

5 A language presentation device provided for conversation between a first user and a second user positioned facing each other across a transparent presentation unit. The language presentation device acquires a first speech uttered by at least one of the first user and the second user, acquires the content of the first speech and a translated content in which the content of the first speech is translated into a language suitable for the first user or the second user, and presents the content of the first speech and the translated content on the transparent presentation unit after horizontally flipping at least either of the two.
