(54) Title: LOCKING PAPERBOARD SLEEVE

(57) Abstract

There is provided a paperboard device for retaining a number of pots (12). The device (11) has a top (14), side panels (15, 16) and first and second base panels (21, 22) which interlock. A keel panel which is hingedly connected to the second base panel (22) is formed out of the plane of the base panels and between two rows of pots (12). The keel panel is retained in this position by a hook portion (34) of a locking panel attached to the first base panel (21) engaging a notch (40) in the keel panel.
