(54) Title: OBJECT PROPERTY META MODEL EMULATOR FOR LEGACY DATA STRUCTURES

(57) Abstract: A method of wrapping legacy data structures (50) enables the data structures to be used with an object-oriented program and enables a single object to access related attributes in multiple legacy data structures (40). In one embodiment, an interface class (70) is defined for each pseudo property to be represented. A C++ wrapper is built around each legacy data structure (50) that implements the interface that was defined in the abstract pseudo property class.
