(54) Title: A METHOD FOR DETECTING DEAD INSECTS AND AN ARRANGEMENT FOR IMPLEMENTING THIS METHOD

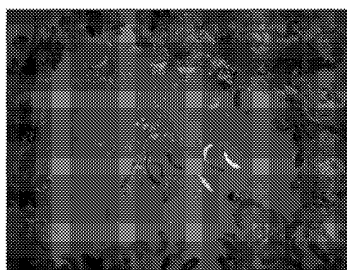

Fig. 2

(57) Abstract: A method for detecting dead insects, including fragments thereof, characterised in that the insects are placed in the range of a UV radiation source (1) and in the field of vision of an image recording device (2) connected to a computer (3), and the image of insects subjected to UV radiation is recorded by means of the image recording device (2), and subsequently the image acquired in such a way is analysed in order to identify noticeably brighter objects. The application also relates to an arrangement for detecting dead insects according to this method.
