(54) Title: REMOTELY CONTROLLED FLUID DISPENSER

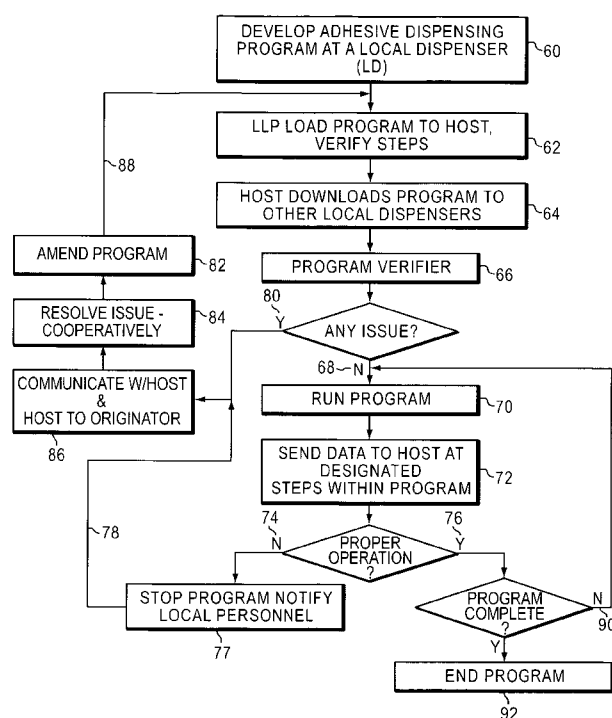

FIG. 6

(57) Abstract: A network of fluid dispensers is disclosed where a Host controller may exchange information with local dispensers, and where local dispensers may exchange information with each other. The information may be dispensing processes, information regarding quality and reliability, problems and/or helpful information, and applications. The information may be exchanged in real time during fluid dispensing where any issues may be shared and resolved quickly even in remote locales. The applications may be developed at a local dispenser or at the Host and then shared throughout the network. The operating systems may include application software development tools, and the applications may include: monitoring deliver schedules and materials inventories; automatic issuing of purchase orders; training broadcasts; implementing industry standards for validation and approval.
