(54) Title: AN IMPROVED BUCKET**(57) Abstract**

A bucket (1) includes a first liquid chamber (12) adjacent to the main opening in the bucket (1). The chamber (12) is adapted to permit a floor cleaning implement to be inserted into the first chamber (12). A second liquid chamber (13) is located in the bucket and at least a portion of the second chamber (13) is located between the first chamber (12) and the bottom of the bucket (1). An aperture (14) between the first and the second chambers (12, 13) permits liquid communication between the chambers (12, 13) through the aperture (14). The aperture (14) is located in a lower side wall (15) of the first chamber (12). The aperture (14) prevents a cleaning implement from passing from the first chamber into the second chamber but permits particulate matter to pass from the first chamber to the second chamber, in use.
